

Wireless OSAS Handheld Applications

Imagine having your inventory quantities updated the moment goods are received at your facility. We can help you speed up Sales Order verification by updating the invoice quantities as you pick the order, even print the invoice from the handheld unit. Freely roam about your warehouse using a handheld device with a real-time 802.11 (Wi-Fi) connection to your OSAS information. You can now easily perform a physical count with single step entry of the quantities. Response Computer Group has developed a suite of handheld OSAS applications that allow you to do all this and much more!

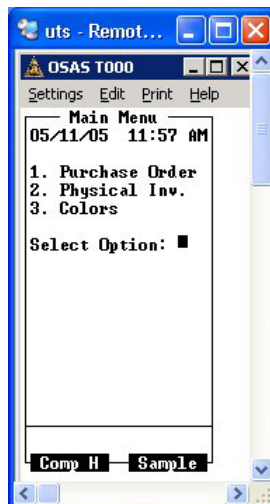

Our Unix/Linux solution operates via a telnet session from the handheld device to the OSAS server.

M7100
Wireless Hand-Held
Terminal

The Microsoft solution operates via a RDP connection to your OSAS Windows 2003 Terminal Server.

Product Features
